

PAS Stagesystems

Specialized in manure storage!

/// PAS MANURE STORAGE SYSTEMS

PAS manure storage systems is specialized in designing, building, inspecting all types of manure storage systems and covering. You can rely on more than 35 years of experience.

In addition to new construction, you can also contact PAS for **repairs**, **cleaning** and **inspections**. PAS builds and repairs throughout Europe with its own qualified personnel!

/// Why PAS Manure Stagesystems?

- Over 35 years of experience
- KIWA / KOMO certified
- Own assembly team (VCA certified)
- From building to inspection
- All types of manure storage
- Delivery throughout Europe

Inspection, repair and cleaning of manure storage systems and covers

/// Concrete silo: **durable & maintenance-free**

De Appel concrete silo is a Dutch product and is fully KIWA certified.

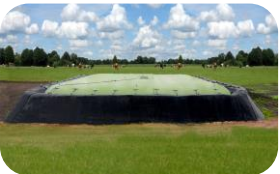

The prefabricated elements guarantee you a silo that is produced under the most ideal factory conditions.

/// PAS steel silo: **galvanized or double-sided enamelled**

The prefab steel silos are still being built, either with durable adaptations for a longer lifespan.

Because no concrete floor is needed, this silo is extremely suitable for every type of foundation.

/// PAS Manure bag: **placed on any surface**

The manure bag is maintenance-free, easy to mix and later move again.

With the use of extra heavy foil, a steel ring in the mix hatch and special deaerators, a PAS fertilizer bag lasts for years.

/// PAS Netsilo: **easy to build on any surface**

An ideal solution for storage up to 2,000 m³. Quick assembly and movable.

The PAS netsilo with a height of up to 3.0 meters is ideal to (let) mix and empty.

/// PAS Foil lagoon: **flexible in size and content**

A foil basin is an ideal and relatively inexpensive solution for storing a lot of manure. A foil basin can be installed in any size.

A foil basin can be mixed very well with mixing holes.

/// PAS MANURE STORAGE SYSTEMS

PAS manure storage systems is specialized in designing, building, inspecting and repairing all types of manure storage systems and covering. You can rely on more than 35 years of experience.

In addition to new construction, you can also contact PAS for **repairs**, **cleaning** and **inspections**. PAS builds and repairs throughout Europe with its own qualified personnel!

/// Cleaning, repair & maintenance

Regular maintenance and monitoring of your manure storage system is the key to a long endurance.

Through its years of experience with all types of manure storage systems, PAS can carry out cleaning and repairs by own personnel:

- Cleaning manure storage systems
- Repair silos and covers
- Repair manure bags, foil basins
- Move silos / manure bags

/// PAS Golfplaten silo: Galvanized and coated: double protected!

Due to the flexible dimensions, the silo can be placed almost anywhere on any surface.

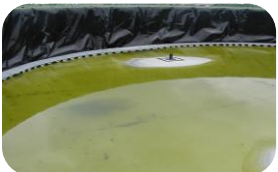

The galvanized sheets and an extra coating for protection make the silo a sustainable solution for the storage of manure.

/// PAS Silo cover: the ideal cover for a silo and maintenance-free

The hardwood center column and straps hold the PVC reinforced hood in place. As a result, the silo is permanently covered.

With holes the hood the silo cover is ideal for silo mixing.

/// PAS Floating cover: suitable for every type of silo, both new and existing.

The ideal and inexpensive cover for every type of silo!

The biggest advantage of a floating deck is that no load is placed on the silo wall.

/// PAS Flexitank: lexible manure storage at every place!

For the temporary storage of manure, there is the Flexitank. Ideal in places or countries where building permits are difficult or impossible to obtain.

It is a unique product that enables safe and sustainable storage at random locations.

/// PAS accessories & parts

PAS supplies various mixers, (manure) pumps and all kinds of piping for all types of manure storage systems.

You can also contact PAS Manure Storage Systems for replacement parts.
